

EZorb Calcium® - Calcium Aspartate Anhydrous

Juvenile Rheumatoid Arthritis

(Unedited)

From: Courtney

Subject: **Juvenile Rheumatoid Arthritis** - since I was in 4th grade

When I was in fourth grade, I was diagnosed with JRA. I am now 22 years old. The area affected was mainly my wrists and hands. However, in the last couple of years, I have noticed that some of my other joints were beginning to hurt as well. I am currently taking Enbrel. For a while, this was a "miracle" drug for me - it took away all pain and swelling

But within the last year, it, for some reason, hasn't been doing the trick. I had a great aunt who suffered with arthritis her whole life - same situation as me, and she ended up being bed-ridden, her bones and joints completely destroyed. Determined that I would do whatever it took to avoid that situation, I have relied on God and stayed as active as possible.

One day, searching for how nutrition affected arthritis on the internet, I came across **EZorb**. Like most other people, I was skeptical about all the "success" stories. But I decided to give it a try. I bought some. I take between 4-6 capsules (or 2-3 teaspoons of powder) a day.

This is what I have to say about it.....I can feel it...seriously. My bones and joints haven't felt so strong in a long time. The swelling that was in my wrists and fingers is gone. I am currently still taking Enbrel, but when I was just taking the Enbrel, I still had swelling and pain. Because it takes longer for some people to see results than others, I believe that as I continue taking it, I will be able to go off of prescription medicine! I took it for over a month before I started to notice a difference....but now I can definitely tell it's working.

There's a lot of things out there that people claim can heal the pains of arthritis, but even in working with my diet, I didn't find the relief and actual

restoration of my joints as I have in taking **EZorb**. It is truly an answer to prayer for me:)

God Bless,
Courtney

Why is EZorb so effective against Juvenile Rheumatoid Arthritis?

Like many other bone, joint and muscle diseases, juvenile rheumatoid arthritis is caused by **weakened bone, joint and muscle metabolism**. As part of the aging process, the metabolism slows down naturally, so it's not unusual for elderly to develop rheumatoid arthritis.

Unfortunately a small segment of the population experience decelerating bone, joint and muscle metabolism at an earlier stage of life and become extremely vulnerable to diseases like juvenile rheumatoid arthritis and fibromyalgia.

The only effective way to correct those diseases is to go to the source of the problem by raising bone, joint and muscle metabolism. **EZorb does exactly that.**
